Company/Products

FORGELUBE SRL de CV., is a highly specialized firm fully committed to solve the lubricating problems affecting the today's sophisticated metalworking industry. We have the knowledge and expertise to solve and improve any metalworking operation from the point of view of the lubricant aspects. Operations involving ferrous or non-ferrous metals can be assured of our help. Our line of die release agents and parting compounds have been successfully introduced at numerous operations involving:

- **Forging (Hot and Warm)**
- **Hot extrusion**
- **Upsetting**
- **Wire Drawing**
- **Tube forming**

In addition to our wide range of quality products **Forgelube** provide

- **Special formulations for your special jobs**
- **On time deliveries**
- **Highly competitive international prices.**
- **Complete line of application equipment**
- **Guaranteed technical assistance.**

In short, our company does whatever possible to help the industry to produce more and better at the best competitive market business options.

We guarantee to provide:

- Increased productivity
- Better die life
- Higher quality parts
- Improved metal flow
- Less maintenance

Names that Spell Quality

The LUBRIKA line of Metalworking lubricants is designed for the lubrication and protection of dies and billets during hot and warm forging processes. These water-based products help increase die-life, improve productivity and enhance part quality. LUBRIKA products effectively wet dies at elevated temperatures in both hammer and press forging operations. Used as billet coatings to prevent scaling during preheating and provide effective lubrication during subsequent forging.

Spray Equipment

To make possible the proper application of our lubricants we have developed a complete line of equipment consisting in nozzles, open and pressurized storage tanks, handguns, reciprocators and special tailor made lubricating equipment.
